

optimizing your business

www.rastek.id

rastek.id – Rastek Inovasi Digital, based in Bandung, Indonesia is a company engaged in the field of Information Technology specializing in Computer Vision, AloT solutions and microservices systems.

We provide services & solutions from upstream to downstream that can help companies & government bodies face the challenges of businesses that are developing so fast & dynamically.

Currently we are supporting several national IT projects and developing our services in Africa.

panon™ air - Industrial

AI-Powered Solutions for Industries

Computer vision systems that solve factory automation or inspection problems. By creating a variety of solutions, panon AIR Imaging covers all industrial sectors and their specific needs, enables devices to learn and solve problems in logistics, industrial automation, quality control and inspection.

Panon Computer

panon™ tera - Security

Surveillance Made Easy

Enhances your safety with technology that's smart, secure and easy to manage. Integrated with powerful Video Management System, floor plan, map and various alert notification that optimize for your surveillance activities such as intrusion detection, safety parameter, face recognition and more in a simple dashboard.

PANON ANALYTIC LIBRARY >150 OBJECTS

Application

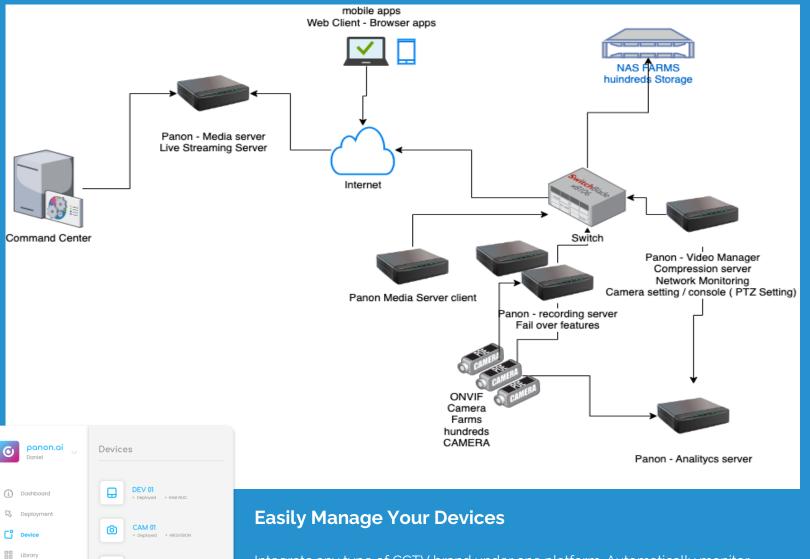

Not Just Another Video Management Platform

view is Video Management System from panon. The system is designed to optimize resources use, friendly interface and easy to expand the number of management cameras. The system consists of an administrative server and software to support the system administrator up to 500 camera feeds.

VIDEO MANAGEMENT SYSTEM (VMS)

Setting

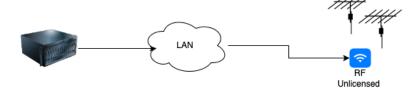

Integrate any type of CCTV brand under one platform. Automatically monitor events from large number of surveillance (CCTV) cameras, alarms, or sensors.

Monitors all the systems and provides an at-a-glance view alerting security to any potential risks, threats, events, or scheduled tasks

Drone System

- RF spectrum Unlicensed based (900 MHz for telemetry - control, 2.4 GHz for video streaming
- web based flight management
- BEEHIVE SDK

BEEHIVE Drone

- Drone Type: Multi-copter
- Vehicle Mass: 2.400 gram
- · Dimension (LxWxH):65x65x30 cm
- · Flight Time: 20 Min
- · Camera: RGB 20.1MP, RGN 12MP
- Altitude: 120 m
- · Coverage: 25 Ha
- Cruise Speed: 8 m/s
- · Take-off Landing type: Vertical
- · Material: Carbon

panon™Drone Vision

Data obtained from surveillance drones could be processed as operational data to create informed business decision

Data obtained from surveillance drones could be processed for inspection, quality control, and other industrial issues

Our Product

Simpul Suite is an advanced IoT platform designed specifically to handle heavy-duty enterprise-grade IoT solutions. It supports wide-range of industrial sensors, various business purposes, and cloud scalability. Simpul Suite helps you handle the engineering needs of IoT while you focus on your business.

Sub Product

Simpul Energy & Water Monitoring

Description: Smart metering system for both residential and commercial properties. Tracks electricity and water consumption in real-time, analyzes usage patterns, and detects leaks.

Benefits: Promotes conservation, reduces utility bills, and enables proactive leak prevention.

Simpul **Street Light**

Description: Intelligent streetlight control and monitoring network powered by AloT. Optimizes energy use, detects faults in real-time, and adapts lighting intensity based on schedule and various sensors.

Benefits: Enhances public safety, lowers operational costs, and reduces a city's carbon footprint.

Simpul Agro

Description: Precision agriculture solution utilizing sensors, AI, and IoT. Monitors soil conditions, crop health, and weather data to provide actionable insights.

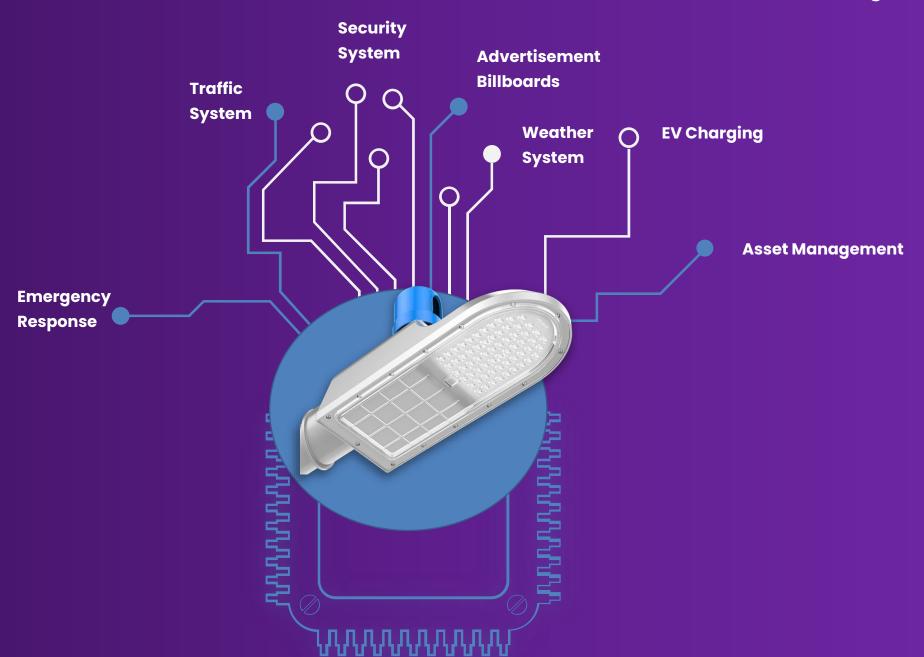

Benefits: Maximizes yield, optimizes resource use (water, fertilizer), and aids in early disease detection.

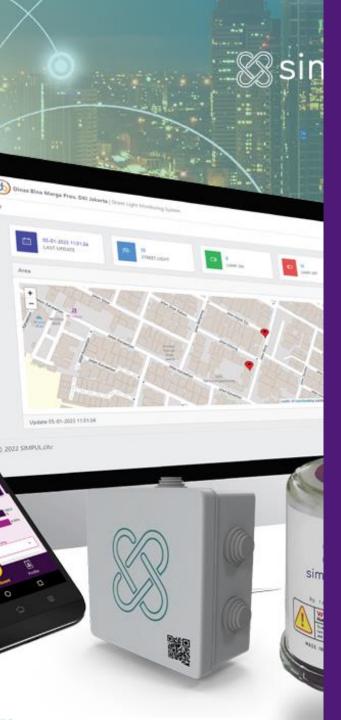

Simpul **Data Center Monitoring**

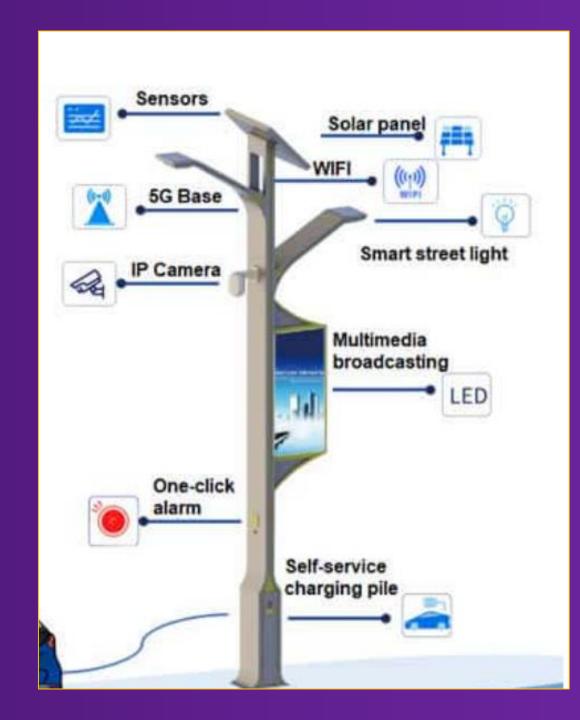

Description: Comprehensive AloT solution for critical data center environments. Monitors temperature, humidity, power, security, and more. Predicts potential failures and optimizes infrastructure.

Benefits: Ensures uptime, maximizes energy efficiency, and safeguards valuable IT assets..

COST SAVING

Energy Usage Efficiency

Alert System

System will send notification when anomalies found

Realtime Monitoring

Realtime monitoring your utility (gas, water, electricity) level, flow, and pressure or moving
In and Out from space to space

Interoperability

Ease of integration between system using open secure API

Multi Use Cases

Tracking tag also work for Human Safety Environment operation

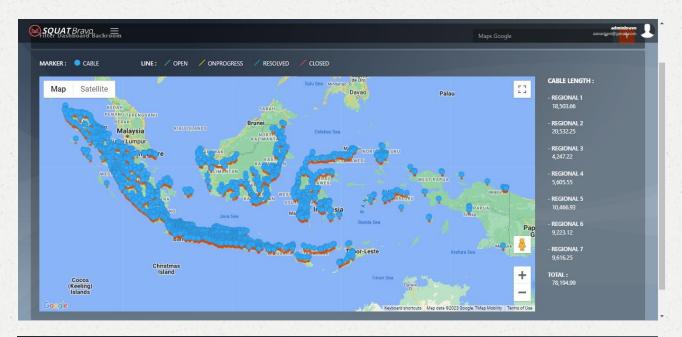

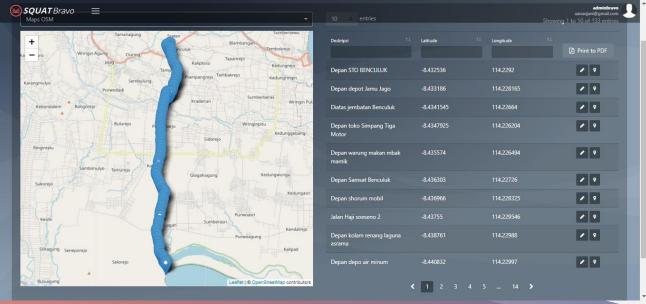

Workforce Management

FOMS is the work management system for daily fiber optic maintenance system.

It has been deployed since 2017, managing >3000 engineers throughout Indonesia and thousands of tickets everyday.
